Art Unit: 1761

1. Claims 35-52 str rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 35 and 40 recites “ the puroindoline is added in an amount effective for increasing the firmness of the biscuits”. Page 4 of the specification discloses the increase in firmness is observed in soft and puff biscuits. The increase in firmness is not found in every kind of biscuit; thus, the claims are not enabling for all kinds of biscuits.

2. Claim 39 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 39 recites “ a fat content of greater than or equal to 7%”. The specification only discloses “ greater than 7%”; there is no disclosure of 7%. Also, there is no disclosure of “ a dough without added emulsifier”.

3. Claims 44-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admission of prior art.

On page 6 of the specification, applicant discloses “ the flours previously used in biscuit manufacture have a puroindoline content which does not exceed .2%”.

Art Unit: 1761

The prior art discloses biscuits containing up to .2% puroindoline. The prior art does not disclose the properties and fat content claimed.

The amounts recites in claims 50 and 52 is .02 and 5% and .2-2%. The amount in the prior art biscuit falls within both of these ranges. Thus, the properties cited will obviously be found in the prior art biscuit. While the prior art does not disclose the amount is added, this is not seen to be patentably significant as long as the amount falls within the range. The properties result from the puroindoline. If the amount of puroindoline is the same, the properties are the same. With respect to claim 51, an amount greater than .2% can be .201 which does not deviate from .2%. As to the fat content, it would have been obvious to vary the fat content depending on the type of biscuit and this can readily be determined by one skilled in the art.

4. Claims 35-43 are free of prior art because the prior art does not teach the step of admixing the dough or flour with puroindoline.
